

IOEMA-1 Recognised as CPEI by the European Commission

Rotterdam, Netherlands – 05th of February 2026 - I'm pleased to share that IOEMA-1 has been recognised as a Critical Project of European Interest (CPEI) in the European Commission's latest report on strategic connectivity. <https://lnkd.in/e4mP7re7>

This acknowledgement underscores the strategic importance of diverse, and secure subsea fibre routes for Europe's long-term digital autonomy and highlights the essential role IOEMA-1 will play in strengthening Europe's digital resilience.

Enhancing connectivity between major European markets and data centre growth zones, IOEMA-1 is designed to address the rapidly growing demand for low-latency, high-capacity infrastructure to support the accelerating demand of cloud platforms, AI workloads, and data-intensive industries.

At the heart of the system is our 3S architecture:

A configurable, monitored, and resilient subsea infrastructure platform engineered for long life, infrastructure grade performance. Designed to meet the expectations of hyperscalers, carriers, and mission critical users who require flexibility, visibility, and uncompromising reliability.

This recognition reinforces the strategic relevance of IOEMA-1 and underscores the opportunity to participate in a policy-aligned, future-proof asset at the heart of Europe's digital transformation.

We look forward to the next stage of engagement with government stakeholders and our partners across the investment and technology ecosystem as we advance this essential new route for Europe's digital future.
